Introducing

Secure Track

Real-Time Safety Monitoring
for Your Organization

Secure Track is the latest innovation in safety technology, designed to empower organizations with real-time location tracking, emergency communication, and intelligent alert systems, protecting individuals on the move. Whether you're managing campus safety, coordinating field teams, or enhancing safety tools for lone workers, **Secure Track** delivers peace of mind.

Regroup MAP

🛡 **Activate Secure Track**

Where are you going?

Dorms | **Midtown Campus** | Northwood Campus

How are you getting there?

How much time do you need?
36 minutes

By activating Secure Track you're agreeing to have Regroup Mobile share/track your location for a period of time and/or location match provided above. Your location will be shared every 30 seconds.

You will receive an alert requiring a response once you reach your location or time expires.

Start Tracking | Cancel

Key Features

- **Real-Time Location Tracking:**
  Track individuals who share their location in real-time via a centralized monitoring console. Color-coded session statuses (green, orange, red) help quickly identify events labeled as Normal, Warning, or Emergency.

- **Route Monitoring & Deviation Alerts:**
  Users can select a preferred route (similar to Google Maps), and the system monitors for deviations. Admins are alerted if users stray from their path or stop moving unexpectedly.

- **Emergency Pause & PIN Protection:**
  If movement stops for two minutes, users must enter a PIN to continue or trigger an emergency pause, ensuring a rapid response in critical moments.

- **Live Refresh Rates:**
  The monitoring console updates every 5 seconds, while the mobile app refreshes every 30 seconds—keeping location data current and actionable.

- **Customizable Alert Messaging:**
  Admins can configure alert messages and delivery methods (email, text/SMS, in-app), ensuring the right people are notified instantly. Even non-admins can receive alerts with contact info for follow-ups when desired.

- **Flexible Access & Group Settings:**
  Secure Track supports open discussion groups for interactive communication. Contacts without admin access can still receive alerts and view user information, ideal for lone workers and organizations with layered access needs, such as campuses or corporate teams.

- **Location-Based Messaging (MVP):**
  Currently supports a single map location per organization, with messages routed to a unified security team.
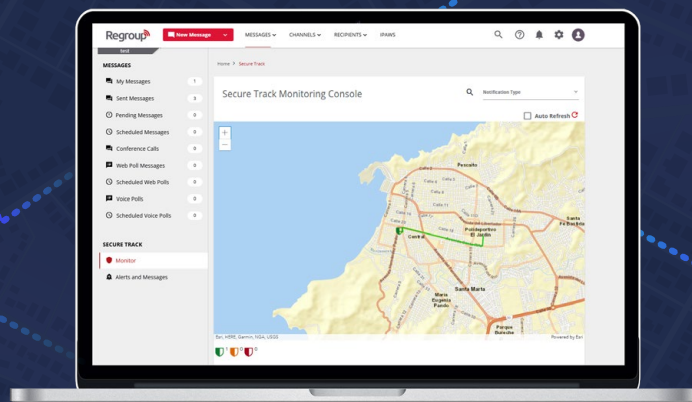

- **Mobile App Functionality:**
  Users can initiate sessions, select routes, send messages, and manage emergency settings—all from their mobile device.

Real Solutions for Real Events

A remote home healthcare worker wants to ensure her safety as she walks back to her car in the dark after a late home healthcare visit. **Secure Track** offers a solution: real-time, location-specific safety monitoring for lone workers. In an unpredictable world, ensuring the safety of lone workers and individuals (on campus, in the field, or during emergencies) is crucial.

Secure Track is more than a safety tool—it's a smarter way to protect your people, streamline communication, and respond faster when it matters most. With real-time tracking, intelligent alerts, and flexible access controls, it empowers modern teams to act quickly and effectively in any situation.
